

KEEP YOUR CLOUD STRATEGY HEALTHY WITH HIPAA-COMPLIANT SAAS DATA PROTECTION.

The healthcare industry continues to be saddled with increasing demands: better, faster, more affordable care and implementation of the latest technologies while also maintaining strict privacy and security standards. In service of these goals, many healthcare institutions are turning to cloud technology to increase agility, connectivity, and accessibility. SaaS applications like Google Apps, Office 365, Salesforce, and Veeva are revolutionizing healthcare operations, but proper data protection, especially of protected health information (PHI), remains a top concern for administrators.

A HIPAA-compliant cloud-to-cloud backup and restore solution like Spanning Backup can give healthcare organizations, payers, and providers using SaaS applications peace of mind while protecting the privacy of patient data in the cloud. Not only can Spanning help your organization maintain compliance standards, but it also protects against data loss due to human error, hacking, malicious behavior, sync malfunctions, and other issues not covered by cloud vendors.

SPANNING BACKUP PROTECTS SAAS-BASED HEALTHCARE DATA

Spanning helps organizations entrusted with PHI to work in the cloud with confidence when using leading SaaS applications like Google Apps, Office 365, and Salesforce. Spanning Backup provides automated, daily backups of your application data and the ability to restore any lost or deleted data back into your environment from any point in time. The restore process is so simple that both IT administrators and end users can quickly and easily recover lost or deleted data without calling in an IT expert.

ENJOY FREEDOM FROM WORRY OVER DATA LOSS AND COMPLIANCE.

Spanning Backup delivers the most trusted, reliable backup and recovery for SaaS applications including Google Apps, Office 365 and Salesforce. For Covered Entities and their Business Associates, our powerful and easy-to-use solutions help meet compliance standards surrounding data retention, protection, and accessibility. Spanning Backup provides:

- **Automated and on-demand backups:** The software is so powerful that you can set it and forget it, yet also gives IT administrators maximum control and visibility over data backups.
- **Industry's most advanced recovery:** Our recovery process restores your information with files structures, sharing settings, metadata, and customizations intact. The point-in-time feature allows you to restore any historical version of data. Plus, you can restore a single file or an entire account; even restore data to another user's account with the cross-user restore feature.
- **Easy-to-use data search and restore:** The user interface is so intuitive that even end users can be empowered to resolve their own data loss issues without calling in support.
- **Advanced administration and complete status monitoring:** Spanning Backup gives admins meaningful insights into backups, alerting them to any errors with actionable instructions for resolution. We provide transparency so you can have peace of mind.
- **World-class security:** We maintain industry-leading security and availability standards, including HIPAA and SSAE 16 SOC 2 compliance, as well as 128-bit SSL and 256-bit AES encryption.

“As an FDA regulated business, we have certain compliance requirements that we have to achieve - the biggest one being data retention. Because I know Spanning just works and our data in the cloud is protected regardless of what happens at Microsoft, it's one less thing we need to worry about on a daily basis.”

Todd Miller

IT DIRECTOR, MILLAR, INC.

SAAS BACKUP IS PREVENTATIVE HEALTHCARE FOR YOUR CLOUD STRATEGY.

Spanning Backup provides automated, daily backup and accurate restore via our HIPAA-compliant solutions. We'll keep your data safe and accessible, no matter what, so you can focus on what you do best: keeping people healthy.
